SUMMARY

Full-stack software developer shipping production features to enterprise platforms serving 6.8M+ users, across React, TypeScript, C#/.NET, Go, and SQL Server. Strengths in RESTful API design, concurrency and query optimization, automated testing, and CI/CD.

TECHNICAL SKILLS

Languages: C#, TypeScript, JavaScript, Go, Python, Java, SQL, Swift, C
Frontend: React, Next.js, React Native, Angular, HTML, CSS, Tailwind
Backend & APIs: .NET, Node.js, Gin, Django, RESTful APIs, Stripe, Auth0 / JWT
Data & Cloud: SQL Server, PostgreSQL, Supabase, MySQL, Oracle, Azure, Azure DevOps, AWS, Vercel
Practices: Git, CI/CD, GitHub Actions, Agile/Scrum, Unit & Automated Testing (Jest, Vitest), Code Review

PROFESSIONAL EXPERIENCE

Dayforce — **Toronto, ON**
Software Developer Associate — Dec 2025 – Present

- Build and ship features for the enterprise Scheduling platform used by **6,984 client organizations and 6.8M+ employees** worldwide, across a React, .NET, and SQL Server stack.
- Review peer code against quality and security standards, gating changes that reach production at global scale.

Dayforce — **Toronto, ON**
Software Developer Intern — Jan 2025 – Dec 2025

- Cut backend API response times from **5+ minutes to under 15 seconds** by refactoring .NET services and rewriting SQL Server queries, improving platform scalability.
- Converted 5 manual test scripts into automated tests, reducing regression testing time by **40%** and clearing a critical report validation bottleneck; the framework was later adopted by other engineering teams.
- Resolved **50+ defects**, including production incidents fixed within hours, by debugging root causes across React, .NET, and SQL services.
- Wrote **150+ unit tests covering 5,000+ lines of code**, raising overall codebase test coverage and release reliability.

Toronto Metropolitan University, Dept. of Architectural Science — **Toronto, ON**
Software Engineer — Sep 2024 – Jan 2025

- Built RESTful APIs in Python/Django and .NET powering real-time data streaming, analytics, and BIM integration.

Ontario Power Generation — **Whitby, ON**
Software Engineer Intern — Jan 2024 – Sep 2024

- Engineered a task scheduling service and automated email notification system, saving **10+ staff hours weekly** and cutting operational costs by **$2,000/month**.
- Owned and developed full-stack web applications (Angular, .NET, SQL Server, Azure) replacing legacy internal systems.
- Optimized SQL queries and backend logic, reducing process execution time from **20 minutes to 5 minutes**.
- Partnered directly with the internal teams using the tools: gathered requirements, designed and built the solution, demoed it, and folded their feedback into later iterations.

PROJECTS

Sisters Through Faith: Event Ticketing Platform | sistersthroughfaith.ca — **Next.js, TypeScript, PostgreSQL, Stripe**

- Eliminated ticket overselling under concurrent demand by moving reservations into an **atomic PostgreSQL function with row-level locking**, holding inventory for 5 minutes and auto-releasing it via Stripe webhooks on failed or expired payments.
- Shipped a live platform handling **hundreds of ticket purchases**, with server-authoritative pricing, Stripe webhook verification, row-level security, per-IP rate limiting, and an admin console for events, refunds, and order exports.
- Resolved request overload on the photo gallery database-side using paginated, indexed queries.

NearMoi: Cross-Platform Event Discovery App | nearmoi.ca — **Go, PostgreSQL, React Native**

- Built a **Go (Gin) REST API** over PostgreSQL serving a personalized, location-ranked event feed via Haversine distance queries, paginated and composite-indexed at the database layer.
- Built the **React Native (Expo) and TypeScript** client for iOS, Android, and web from a single codebase, with Mapbox map exploration, push notifications, and Apple and Google sign-in.
- Automated daily ingestion from **18 municipal event calendars** via a scheduled GitHub Actions pipeline that geocodes, deduplicates, and upserts listings, with per-source failure isolation.
- Secured authentication using Auth0 JWT validation and per-IP rate limiting on credential endpoints to block brute-force attempts.

Zenny: Personal Finance Manager | Product Website — **Swift, SwiftUI, Speech, NaturalLanguage**

- Launched an iOS budgeting app with voice-driven transaction entry and a **self-implemented on-device TF-IDF / k-NN classifier** that learns each user's merchant and category patterns, plus Face ID lock and home-screen widgets.

EDUCATION

Toronto Metropolitan University, BSc (Honours), Computer Science, GPA: 3.7/4.0 — **Toronto, ON | Apr 2026**
